

REDUTOR GSA

Esta classe de redutores foi projetada para o acionamento de todos os tipos de máquinas e aparelhos de baixa velocidade. A característica principal desta linha é uma transmissão por Eixo SEM-FIM e COROA, possibilitando reduções de 1x7,5 até 1x100. A caixa, desenvolvida em alumínio injetado, tem uma forma construtiva adequada ao material utilizado, com uma avançada geometria de engrenamento que resulta em durabilidade e garantia de qualidade.

$$GSA\ 28 - F_x = \frac{FRa \cdot 62}{(62 \pm X)}$$

$$GSA\ 51 - F_x = \frac{FRa \cdot 95}{(95 \pm X)}$$

$$GSA\ 41 - F_x = \frac{FRa \cdot 86}{(86 \pm X)}$$

$$GSA\ 63 - F_x = \frac{FRa \cdot 122}{(122 \pm X)}$$

- O valor de X deve ser negativo se a carga aplicada for à esquerda do centro do eixo e positivo quando for à direita, como mostra o desenho.
- O valor de FRa deve ser retirado da tabela de Forças Radiais de Saída.
